

MD ZUNAID ALI

Software Engineer

+91 8252300728	Kolkata, India	E-Mail ID	GitHub Profile	LeetCode	GeeksforGeeks	Coding Ninja
----------------	----------------	---------------------------	--------------------------------	--------------------------	-------------------------------	------------------------------

Skills

- Programming Languages:** Java, Python, PL/SQL
- Android & Mobile Development:** Android Development (Native), REST API Integration, Retrofit, Dependency Injection (Dagger), Firebase Firestore
- Backend & Frameworks:** Spring Framework (Beginner Level)
- Databases:** Oracle SQL, Firebase Firestore (NoSQL)
- Version Control:** GitHub
- AI & Developer Productivity Tools:** ChatGPT, GitHub Copilot, Cursor AI

Work Experience

Software Engineer - Tata Consultancy Services

Kolkata, West Bengal

2026 - Present

- Developed backend components using **Core Java**, applying multithreading to improve processing efficiency by ~20%.
- Built scalable modules using **JDBC and Servlets**, supporting high-volume database transactions.
- Optimized SQL queries in **Oracle SQL Developer**, achieving up to 25% faster data retrieval.
- Improved database performance through **indexing and query tuning**.
- Applied basic **Spring Framework** concepts to enhance backend scalability and maintainability.
- Integrated and consumed **REST APIs** for efficient system communication.
- Followed clean coding and performance optimization practices within agile development teams.

Android Developer Internship - Nagarro

Kolkata, West Bengal – Remote

Feb 2024 – Dec 2024

- Developed high-performance Android applications using **Java, XML, Material Design**, and modern Jetpack components (LiveData, ViewModel, Navigation) following MVVM architecture for scalable and maintainable codebases.
- Integrated backend services via **Retrofit REST APIs** and Firebase (Auth, Firestore, Realtime DB), implementing secure authentication flows, onboarding animations, and dynamic navigation features.
- Optimized application performance using lifecycle-aware components, custom RecyclerView implementations, and Room database for efficient local storage, improving UI responsiveness by ~15–20% in Agile/Scrum workflows.

Project

[Food Donation Android Application](#)
(Java, Android SDK, Firebase, REST APIs, MVVM)

- Designed and developed an internet-based Android donation platform to reduce food wastage by connecting donors (restaurants/users) with NGOs and beneficiaries, enabling efficient donation management and real-time coordination.
- Engineered scalable application architecture using Java, Android SDK, and modern UI workflows, implementing authentication, donation tracking, history management, and multi-screen navigation to enhance user experience.
- Integrated backend data handling and workflow automation to support donation lifecycle processes, improving usability and streamlining food pickup coordination while promoting sustainable resource utilization.

Education

Institute of Engineering and Management (IEM), Kolkata

Bachelor of Technology - Computer Science & Engineering (CSE)

DGPA – 8.58

2021 – 2025

Courses: [AWS Cloud Practitioner Essential](#), [Introduction to Data Analyst](#).
